#### 4.5 Housing Design Guide

Housing design follow as below

- (1) Avoid the design that housing overlap and press on the active area of the LCM.
- (2) Give enough gap (over 0.5mm at compressed) between the housing and TSP to protect wrong operating.

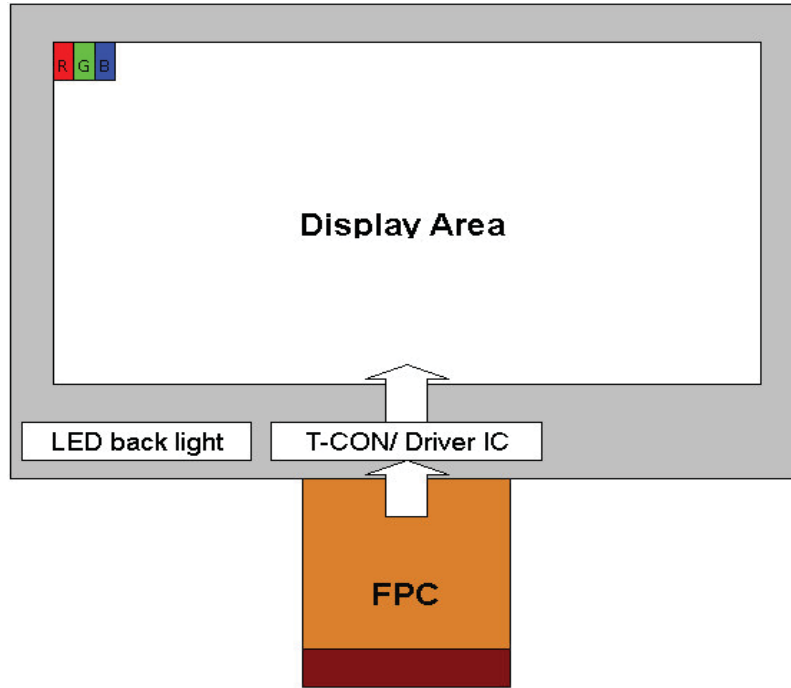

- (3) Use a buffer material (gasket) between the TSP and housing to protect damage and wrong operating.
- (4) Avoid the design that buffer material overlap and press on the inside of TSP view area.

LED life time	Hr	10000	—	—	Hour	(1)(2)

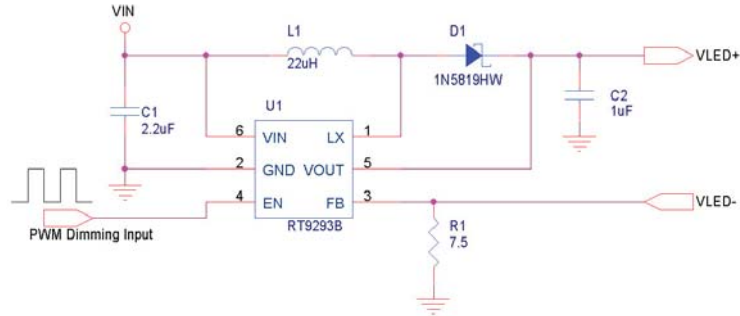

LED Light Bar Circuit

Note (1) LED life time (Hr) can be defined as the time in which it continues to operate under the condition:  $T_a=25\pm 3^\circ C$ , typical  $I_L$  value indicated in the above table until the brightness becomes less than 50%.

Note (2) The "LED life time" is defined as the module brightness decrease to 50% original brightness at  $T_a=25^\circ C$  and  $I_L=40mA$ . The LED lifetime could be decreased if operating  $I_L$  is larger than 40mA. The constant current driving method is suggested.
